

"Math Is Cool" Championships — 2025-26

4th Grade — March 2026

GENERAL INSTRUCTIONS applying to all tests:

- *Good sportsmanship is expected throughout the competition by all involved (competitors and observers). Display of poor sportsmanship will result in disqualification.*
- *Competitors may not use calculators or any other aids on any portion of this contest.*
- *Unless stated otherwise:*
 - *All answers are integers, and any non-integer answers will be "coded" as integers.*
 - *For 5th grade and up, all fractions and ratios must be reduced to simplest form, all radicals must be simplified, and all denominators must be rationalized.*
 - *Do not round or approximate answers. Leave answers in terms of π or other irrational quantities (e.g., $\sqrt{2}$), where applicable.*
- *Units are not necessary as part of your answer, However, if you choose to use units, they must be correct.*
- *Record all answers on the colored cover sheets in the answer column only.*
- ***Be sure that the student name, school, team number, etc. has been filled out at the top of each answer sheet.***
- *Tests will be scored as a 0 if answers are not recorded correctly on the answer sheets.*
- *Blank answer sheets and answer sheets with no name will be scored as a 0.*

FINAL SCORES AND AWARDS

Individual awards are determined by both the Mental Math and Individual Test scores. Individual ties are broken based on the following, in this order: total scaled individual points, total number of correct answers on the Individual Test, Mental Math raw score, number of correct answers from Individual Test #31-40, number of correct answers from Individual Test #16-30, highest numbered question answered correctly on the Individual Test working backwards from #40.

Team (School) awards are based on the highest score from amongst each of the school's "teams of 4 students" in each event and is calculated as $2 \cdot (\text{Sum of highest 3 Mental Math scores}) + 2 \cdot (\text{Multiple Choice}) + 6 \cdot (\text{Team}) + 1 \cdot (\text{Triple Jump}) + 1 \cdot (\text{College Bowl})$, for approximate weights of 25%, 20%, 30%, 15% and 10% respectively. Team ties are broken based on highest event score in order of the events, starting with Mental Math.

MENTAL MATH TEST - 30 sec./quest., 8 problems, ~8%/25% of individ./team scores

The proctor will read each question twice. You may not do any writing or talking while arriving at a solution. Record only your answer on your answer sheet. You may not change, cross out, erase, or write over an answer once you have written it down. The maximum wait time is 30 seconds after completion of the second reading of the question. Correct answers receive 1 point.

INDIVIDUAL TEST - 35 minutes, 40 problems, ~92% of individual score

When you are prompted to begin, tear off the colored answer sheet and begin testing. No talking during this individual test. You will be given a 5 minute time warning. Correct answers receive 2 points for problems 1-30 and 3 points for 31-40 (in the scaled score).

"Math Is Cool" Championships — 2025-26

4th Grade — March 2026

Final Score (out of 8)

Room #

School Name

Student Name

Team #

Mental Math - ~25% of team score & ~8% of individual score

All students in the room will concurrently be asked the same eight questions in this individual test. When it is time to begin, the proctor will read the first question twice. You may not do any writing or talking while arriving at a solution. Once you have a solution, record it on the sheet in front of you. **You may not change or cross out answers once you have written an answer down. If there are eraser marks, write-overs, or crossed-out answers, they will be marked wrong.** Once all students have laid their pencils on the desk, another question will be asked. If a student doesn't lay his or her pencil down, the maximum wait time is 30 seconds after completion of the second reading of the question before the next question is read. You may continue to work on a problem (in your head) while the next question is being read. The raw score is 1 point per correct answer.

STUDENT: DO NOT WRITE IN SHADED REGIONS (or anywhere else, other than the answer box)

Mental Math Contest – Answer Key

30 seconds per question – ~25% of team score & ~8% of individual score

SCORERS — Write-overs, Cross-outs, and Erasures Must be Marked Incorrect (0)
Bracketed items [...] in the answer key are optional.

4th Grade

Answer		
1	8 [dragons]	Slade can slay two dragons in one minute. How many dragons can he slay in four minutes?
2	12 [quarters]	How many quarters does it take to make three dollars?
3	64 [sq. feet]	What is the area in square feet of the largest square that can fit into a rectangle of dimensions eight feet by twelve feet?
4	32	A sequence starts as follows: eight, fourteen, twenty, twenty-six, and so on. What is the next number in the sequence?
5	10 [times]	A broken clock chimes once at the top of every hour. How many times does it chime between nine forty-three PM and seven twelve AM the next morning?
6	60 [= smallest integer]	What is the smallest integer greater than two point nine nine times three point nine nine times four point nine nine?
7	25 [%]	Gracie has a bag with three red marbles, five blue marbles, and twelve green marbles. She picks one marble from the bag without looking. What is the probability in percent that she picks a blue marble?
8	14 [%]	What percent of the whole numbers from one to one hundred are prime numbers that contain the digit three or the digit seven but not both?

"Math Is Cool" Championships — 2025-26

4th Grade — March 2026

Individual Contest

Record all answers on the colored cover sheet. 35 minutes, 40 problems, ~92% of individual score.

No talking during this individual test. A 5-minute time warning will be given.

	Questions 1-30: 2 points each											
1	Gabbie reads 5 pages every day. How many pages will she read in 7 days?											
2	How many cookies are in 2 dozen cookies?											
3	Thirteen red socks and 13 blue socks are in a drawer. What is the smallest number of socks Owynn needs to take out of the drawer without looking to ensure there are at least two socks of the same color?											
4	What is 4,500 minus 3,450?											
5	A whole number is greater than 20 and less than 30. It is divisible by both 2 and 3. What number is it?											
6	There are 5 toy cars on a shelf. Their prices (in dollars) are: \$10, \$12, \$8, \$10, \$10 What is the average price of the toy cars in dollars?											
7	The number of apples picked by students is shown in the table. How many apples were picked in total?	<table><tr><th>Student</th><th>Number of apples</th></tr><tr><td>Aadi</td><td>10</td></tr><tr><td>Kepler</td><td>16</td></tr><tr><td>Yuvaan</td><td>21</td></tr><tr><td>Diane</td><td>8</td></tr></table>	Student	Number of apples	Aadi	10	Kepler	16	Yuvaan	21	Diane	8
Student	Number of apples											
Aadi	10											
Kepler	16											
Yuvaan	21											
Diane	8											
8	Athena has 23 cupcakes. Each plate can hold 3 cupcakes. If she fills up as many plates with cupcakes as she can, how many cupcakes are left over?											
9	Solve for x: $x - 6 = 23$											
10	A rectangle has a length of 8 units and a width of 3 units. What is the perimeter of the rectangle in units?											
11	Here are the scores from a spelling test: 88, 92, 85, 90, 95 What is the median score?											
12	If Triston writes "MATHISCOOL" 10 times, how many more total consonants than total vowels does he write?											
13	Yanek is 7 years old and his mother is 34. After how many years will Yanek be half his mother's age?											
14	There are 14 apples and 6 oranges in a bag. If one fruit is randomly taken out of the bag, what is the probability in percent that it is an apple?											
15	A pile of clay can be molded into a cube with side lengths of 10 inches. Using all the clay, how many rectangular prisms with dimensions 2 x 4 x 5 inches can be made?											
Continued on next page.												

16	How many whole numbers are there between 7 and 24, not counting 7 and 24?
17	In this image of 10-sided dice, how many sides numbered with a 2 are visible? 
18	What is the next number in this sequence? 6, 11, 16, 21, 26, ...
19	Two dollars, 1 quarter, 3 dimes and 4 nickels equals how many total cents?
20	A car travels 63 miles in 3 hours. At the same rate, how many miles does the car travel in 5 hours?
21	Evaluate, and answer as a whole number: $9.2 + 11.7 - 1.9$
22	A number pattern starts like this: 2, 6, 12, 20, 30 . . . What is the 9th number in this sequence?
23	There are 29 students competing in a race. The number of students that finished behind Weibo is 3 times as large as the number that finished ahead of Weibo. In which place did Weibo finish?
24	This rectangular prism is being filled with unit cubes. How many more unit cubes are needed to fill the prism? 

Continued on next page.

25	Every day, a cafeteria offers the choice of a corn dog, nachos, or pizza as lunch entrees. This comes with the choices of water, milk, or soda to drink and a cookie or pie for dessert. If a different combination of one entree, one drink, and one dessert is tried every day, how many days does it take to try every combination?
26	Harini buys 3 markers that all cost the same and 2 erasers that cost \$2 each. He spends \$19 in total. How many dollars would 19 markers cost?
27	A rectangle has side lengths of 19 units and 47 units. Eloise cuts it to obtain the largest possible square and another rectangle. She then continues to cut the remaining rectangle in the same way until there is no rectangle left. How many squares does she have at the end?
28	Katarina has a bag with 13 red balls and 7 blue balls. Without looking, how many balls does Katarina have to pick before she can be certain to pick at least 9 red balls?
29	A shift cipher is a way to write a secret code by shifting each letter in the alphabet by the same amount. If the end of the alphabet is reached, then go back to the start at letter A. Using a shift cipher, the word MATH is encoded as SGZN. As a whole number, what does the following code represent? UTK NATJXKJ LOLZE-LUAX
30	A spinner is divided into 8 equal parts numbered 1 to 8. On a single spin, what is the probability in percent of landing on an even number, or a number greater than 4?

Challenge Questions: 3 points each

31	Kingston has 16 cards. Each card is labeled with a different number from 1 to 16. What is the largest number of cards Kingston can discard if he wants to keep a set of cards that add up to at least 100?
32	A cylinder has a radius of 15 millimeters and a height of 0.12 meters. In terms of π and in cubic centimeters, the volume of the prism can be expressed as $A\pi \text{ cm}^3$. What is the value of A?
33	Taylee has a number. She multiplies it by itself and then adds 8 before dividing by 12. If she ends up with 6, what number did she start with?
34	A number is between 40 and 60. It has exactly four factors: 1, itself, and two other numbers. One of those factors is 5. What is the other factor?

- 35 The pyramid is an example of a "self-descriptive" sequence, where each row describes the digits that are in the previous row. For example, the 2nd row tells us that there was one '2' in the first row. The 3rd row tells us that there was one '1' and one '2' in the second row. A total of 5 rows of the pyramid are included. What is the sum of the digits in the 6th row?

```

                2
              1  2
            1  1  1  2
          3  1  1  2
        1  3  2  1  1  2

```

Continued on next page.

36	A set of five distinct positive integers has a mean of 9, which is also the median. What is the largest possible range, R, where R = the largest integer minus the smallest integer in the set.																																																	
37	How many positive three-digit integers contain the digit 8 at least once?																																																	
38	There are 1000 coins in a jar: pennies, nickels, dimes and quarters. The probability of reaching in and randomly selecting a quarter is 3/5. The probability of reaching in and randomly selecting a dime is 1/8. Ten percent of the coins are pennies. How many nickels are in the jar?																																																	
39	In the following puzzle, place the digits 1 through 9 in the heavily outlined squares, using each digit exactly once, in order to make the three horizontal and three vertical equations true. Calculations are done from left to right and top to bottom, NOT using the usual "order of operations". For example: $3 + 4 \times 2 = 7 \times 2 = 14$. What is the sum of the two numbers indicated by question marks? <table><tr><td>?</td><td>-</td><td></td><td>+</td><td></td><td>=</td><td>9</td></tr><tr><td>+</td><td></td><td>+</td><td></td><td>-</td><td></td><td></td></tr><tr><td></td><td>+</td><td></td><td>×</td><td></td><td>=</td><td>18</td></tr><tr><td>+</td><td></td><td>+</td><td></td><td>-</td><td></td><td></td></tr><tr><td></td><td>+</td><td>?</td><td>×</td><td></td><td>=</td><td>26</td></tr><tr><td>=</td><td></td><td>=</td><td></td><td>=</td><td></td><td></td></tr><tr><td>17</td><td></td><td>15</td><td></td><td>3</td><td></td><td></td></tr></table>	?	-		+		=	9	+		+		-				+		×		=	18	+		+		-				+	?	×		=	26	=		=		=			17		15		3		
?	-		+		=	9																																												
+		+		-																																														
	+		×		=	18																																												
+		+		-																																														
	+	?	×		=	26																																												
=		=		=																																														
17		15		3																																														
40	Xander builds a pyramid of cups with 13 in the bottom row, 12 in the second row, 11 in the third row, and so on, until a single cup stands on top. A gust of wind blows down the top 5 rows of cups and half of the sixth row from the top. With the remaining number of standing cups, Xander builds the largest pyramid possible. How many cups are in the bottom row of the new pyramid?

4th Grade — March 2026

Team Multiple Choice Contest

USE THE FOLLOWING INFORMATION TO SOLVE PROBLEMS #1 THROUGH #3.

The clock is currently showing the time in the afternoon of Friday, February 13, 2026.

1	What time will the clock show in 135 minutes? A) 4:40 pm B) 5:10 pm C) 5:40 pm D) 6:10 pm E) Answer not given.
2	Including the number it starts on (11), how many total numbers on the clock face will the minute hand pass to reach the time of 9:42 pm on February 13, 2026? A) 79 B) 80 C) 81 D) 82 E) Answer not given.
3	When the clock is low on battery it runs at 80% of its normal speed. If the clock starts at 2:55 pm on February 14, 2026 and runs for 6 hours and 20 minutes at the reduced speed before stopping, how many total degrees will the minute hand have swept out during its path? A) 1800° B) 1836° C) 2184° D) 2216° E) Answer not given.

Continued on Next Page

USE THE FOLLOWING INFORMATION TO SOLVE PROBLEMS #4 THROUGH #7.

A modified form of the game Minesweeper, called Hex Marbles, contains a pattern of regular hexagons, where the side length of each hexagon equals one unit. The number inside each hexagon indicates how many other hexagons (not itself) touching the hexagon contain one or more marbles.

- | | |
|----------|--|
| 4 | <p>What is the outer perimeter of the entire shape?</p> <p>A) 28 units B) 30 units C) 31 units D) 32 units E) None of the above.</p> |
| 5 | <p>What is the median of all of the numbers contained inside the hexagons?</p> <p>A) 2 B) 2.5 C) 3 D) 3.5 E) None of the above.</p> |
| 6 | <p>How many of the hexagons contain marbles?</p> <p>A) 6 B) 7 C) 8 D) 9 E) None of the above.</p> |
| 7 | <p>Out of the hexagons that contain marbles, at least one contains only one marble, at least two contain an even number of marbles, and the maximum number of marbles in any one hexagon is five. The sum of all of the marbles is divisible by 4. What is the maximum possible number of hexagons that contain five marbles?</p> <p>A) 3 B) 4 C) 5 D) 6 E) None of the above.</p> |

Continued on Next Page

	USE THE FOLLOWING INFORMATION TO SOLVE PROBLEMS #8 THROUGH #10. A number of people were surveyed about their favorite pizza toppings, with the choices being: cheese, pepperoni, sausage, olives, and mushrooms. Each person picked one favorite topping. The results of the survey are as follows: • Thirty-six people said that olives were their favorite topping. • The number of people who picked olives is 12 more than the number of people who said that mushrooms are their favorite topping. • The ratio of people who picked mushrooms to those who picked pepperoni is 1:3. • The number of people who picked sausage is 12 more than the number who picked olives as their favorite. • 25% of the people picked cheese as their favorite topping.
8	How many people said that mushrooms are their favorite topping? A) 24 B) 36 C) 48 D) 52 E) None of the above.
9	How many total people were surveyed? A) 120 B) 180 C) 220 D) 240 E) None of the above.
10	A Medium Cheese pizza costs \$10.00, and additional toppings cost \$1.20 each. Biff and Eho order a Medium Cheese pizza with pepperoni, sausage and mushrooms. If they divide the cost evenly, how much does each of them pay? A) \$3.40 B) \$6.80 C) \$7.20 D) \$13.60 E) None of the above.

Team Multiple Choice Contest - 15 minutes - ~20% of team score

You will have 15 minutes to answer 10 multiple choice questions as a team. This test is the only test where you will be penalized for incorrect responses. You will receive two points for a correct letter response, zero points for leaving it blank, and minus one point for an incorrect response. When you are prompted to begin, tear off the colored answer sheet, pass out a copy of the test to each team member, and begin testing. **ONLY a letter response should be listed as an answer on this answer sheet.** Correct responses are worth 2 points, incorrect responses are worth -1 point, and absence of a response is worth 0 points.

Team Contest

1	Mr. Sampson sells 6 watermelons for \$4.50 each. As a whole number amount of dollars, how much money did he make?
2	In the regular hexagon shown here, what is the measurement of the angle marked with the question mark, in degrees? 
3	Selena rolls a fair six-sided die three times. In how many different ways can she roll three numbers in consecutive decreasing order? For example, 12, 11, 10 are in consecutive decreasing order.
4	If Kiyan reads 2 pages per minute, how many pages does he read in 3 hours?
5	Which of the following figures numbered from 1 to 5 is NOT a part of the larger figure shown here? Your answer should be the figure number.  1 2 3 4 5
6	There is a stack of eight cards, numbered one through eight, that has been shuffled and placed face down. The game is to turn over cards one at a time until the sum of any two of them is nine, at which point the game is over. If you get \$50 dollars for each card that you turn over, what is the maximum number of dollars that you can win? Your answer should be a whole number amount of dollars.
Continued on next page.	

7	Mateo wants to split a pie evenly between himself and his four friends, but two of his friends want pieces that are half the size of the rest. What percent of the pie do Mateo and his friends who have full pieces eat altogether?
8	Ada bikes a 42-kilometer race in $3\frac{1}{2}$ hours at a constant pace. Harper rides the first half of the distance at $\frac{1}{2}$ of Ada's pace and the second half of the distance at $\frac{1}{3}$ of Ada's pace. How long, in minutes, does it take Harper to ride the entire race?
9	A decagon has 4 vertices labeled A, B, C, and D. If a diagonal is drawn from each labeled vertex to all other vertices (labeled and unlabeled), how many total distinct diagonals are drawn? 
10	In a particular sequence of numbers, the first term is 48. The rest of the terms are determined by these rules: 1. If a term is even, then divide it by 2 to get the next term. 2. If a term is odd, then multiply it by 3 and add 1 to get the next term. What is the 2026th term in the sequence?

Linda Moore Triple Jump

1	In the following correct equations, the same number goes in both circles. What number goes in the square? $\square \times 3 = \bigcirc$ $\bigcirc + 12 = 39$
2	Three meters is equal to how many centimeters?
3	Ivan has a rectangular garden with a length of 8 meters and a width of 5 meters. He wants to put a rectangular fence around the garden that is 1 meter away from the garden on all sides. What is the perimeter of the fence, in meters?
4	Diego is trying to guess what number Leonard is thinking of. Leonard gives him three clues: 1. It is a two-digit whole number. 2. The sum of its digits is 10. 3. It is a square number. What number is Leonard thinking of?
5	What is the next number in this sequence? 102, 99, 96, 93, ...
6	Gavin has a collection of marbles. He gives 5 marbles to his friend Glen. After recounting his marbles, he notices he still has 4 times as many marbles left as the number he gave away. How many marbles does Gavin need to buy to end up with twice his original amount?
7	Tyson baked a big batch of cookies. He gave $\frac{1}{3}$ of the cookies to his neighbors. Then, he ate $\frac{1}{4}$ of the remaining cookies himself. After that, Tyson gave 6 cookies to his best friend. Finally, Tyson decided to save half of the cookies he had left for later. He now has exactly 6 cookies left. How many cookies did Tyson bake at the very start?
8	In the game Flip Flap Floop, a player can earn 3, 7 or 11 points in a single turn. How many different total scores are possible for a single player after three turns?
9	Ishanna is watering her garden using a 9-liter watering can. Ishanna fills her watering can at a rate of 3 liters every 150 seconds. She waters her plants using the watering can, pouring 2 liters every 5 minutes. If Ishanna starts with an empty can and needs 13.5 liters of water to water her garden, what is the shortest amount of time, in minutes, she needs to water her garden? She does not have to fill the can completely if it is not necessary.

- 10 In the following crossword puzzle, every answer is a whole number, and exactly one digit goes in each box. Only the digits 1 through 9 are used, and they can be used more than once. Once you have solved the puzzle, find the sum of the digits that are in the boxes numbered 3, 4, 8 and 9. What is the sum?

Across clues:

- 1 Across: A multiple of 7
- 3 Across: A prime number
- 5 Across: Consecutive ascending (getting bigger) digits
- 7 Across: Equals 10 Across plus 700
- 8 Across: Five different odd numbers
- 10 Across: Equals 11 Across plus 10
- 11 Across: A multiple of 5

Down clues:

- 1 Down: A multiple of 11
- 2 Down: Five different odd numbers
- 3 Down: A palindrome equal to 8 Across minus 2 Down
- 4 Down: The square of an even square
- 6 Down: The first and last digits add up to the middle digit
- 8 Down: A multiple of 11
- 9 Down: A multiple of 5

Mental Math Contest

MENTAL MATH - 30 seconds per question - ~25% of team score & ~8% of individual score

All students in the room will concurrently be asked the same eight questions in this individual test. When it is time to begin, the proctor will read the first question twice. You may not do any writing or talking while arriving at a solution. Once you have a solution, record it on the sheet in front of you. **You may not change or cross out answers once you have written an answer down. If there are eraser marks, write-overs, or crossed-out answers, they will be marked wrong.** Once all students have laid their pencils on the desk, another question will be asked. If a student doesn't lay his or her pencil down, the maximum wait time is 30 seconds after completion of the second reading of the question before the next question is read. You may continue to work on a problem (in your head) while the next question is being read. The raw score is 1 point per correct answer.

1	Slade can slay two dragons in one minute. How many dragons can he slay in four minutes?	
2	How many quarters does it take to make three dollars?	
3	What is the area in square feet of the largest square that can fit into a rectangle of dimensions eight feet by twelve feet?	
4	A sequence starts as follows: eight, fourteen, twenty, twenty-six, and so on. What is the next number in the sequence?	
5	A broken clock chimes once at the top of every hour. How many times does it chime between nine forty-three PM and seven twelve AM the next morning?	
6	What is the smallest integer greater than two point nine nine times three point nine nine times four point nine nine?	
7	Gracie has a bag with three red marbles, five blue marbles, and twelve green marbles. She picks one marble from the bag without looking. What is the probability in percent that she picks a blue marble?	
8	What percent of the whole numbers from one to one hundred are prime numbers that contain the digit three or the digit seven but not both?
